CHETAN KAMATAGI

Hubballi, Karnataka

+91 90364 16828 | kamatagichetan8@gmail.com | LinkedIn | GitHub

Profile Summary

- Motivated professional with a strong work ethic and adaptability. Proven ability to excel in unsupervised environments and rapidly acquire new skills.
- Exceptional interpersonal skills enhance collaboration and communication in team settings.
- Skilled in automating data workflows and tasks with Python, optimizing efficiency and minimizing manual errors.
- Published researcher with hands-on experience in advanced robotics and automation projects.

Technical Skills

- DSA
- Machine Learning
- Advanced Python Programming
- ML Ops and AI
- Generative AI
- IoT and Smart systems
- OpenCV and Image Processing

Experience

Tata Electronics – Graduate Engineer Trainee **July 2024 – June 2025**

- Contributed to cross-functional team meetings, ensuring adherence to product quality standards. Executed Kaizen initiatives and cost-reduction projects, saving considerable amounts.

Tata Electronics - Automation Engineer Intern **Jan 2024 – June 2024**

- Contributed to cross-functional team meetings, ensuring adherence to product quality standards. Executed Kaizen initiatives and cost-reduction projects, saving considerable amounts.

Projects

Humanoid Robot | *Python, MySQL, NLP, TensorFlow, ChatGPT API* | GitHub Repository **Dec 2023**

- Developed Maya 3.0, a humanoid robot with advanced features like **autonomous navigation**, **face tracking**, **person identification,** and **NLP integration** using ChatGPT for interactive communication, utilized **Python, ROS, forward kinematics**, and simulation tools like **Gazebo** to optimize functionalities and ensure seamless human-robot interaction.

6 DOF Articulated Robotic arm | *SQL, Python, Flask, Trajectory planning* | GitHub Repository **May 2023**

- Engineered a 6-DOF articulated robot with a 500-gram payload capacity, integrating forward and inverse kinematics for precise end-effector positioning, developed intuitive GUI and web-based control interfaces using **Python** and POST requests for seamless **real-time operation**, leveraging skills in **robotics**, **kinematics**, and **software development** with tools like SolidWorks, ROS, and Python.

Decentralized Traffic Control System | *Python, AWS Cloud, Edge AI, IoT, OpenCV*| GitHub Repository **Aug 2022**

- Developed a *Decentralized Traffic Control System* using the YOLO v5 model to detect and classify vehicles as LMV's and HM's, dynamically adjusting green light durations to optimize traffic flow and reduce waiting times at junctions. Integrated tools and technologies like **Python**, **AWS Cloud** for data processing, microcontrollers for signal control, and high-resolution cameras for real-time vehicle detection, showcasing expertise in **computer vision, IoT, and ML.**

Education

KLE Technological University **Oct 2020 – June 2024**

Bachelor of Automation & Robotics – CGPA: 9.2 *Hubballi, Karnataka*

KLE's C.S. Angadi PU College **June 2018 – June 2020**

Science stream – Percentage: 92.56 *Gokak, Karnataka*

Extracurricular / Certifications

- Winner of Smart India Hackathon – 2022 – view credentials
- Data Science – view credentials
- Machine Learning with Python – IBM – view credentials
- MLOps - view credentials
